# VANE

---

A wall swiveling lamp that can be rotated 325 degrees. Hence the name Vane, that is a weathercock. The lamp mounts **2 mains voltage Seoul LED modules, ACrich 3 last version**. It doesn't need a driver, and it is dimmable with a normal **phase cut switch**. The available colors are: matt white - matt black - matt metallic gold - matt metallic copper.

**“All this wondering was the  
weather vane on top of the  
building of unrest and of  
discontent”**

**John Steinbeck**

# RAMETTO

---

Collection of pendant lamps in a stylized shape, inspired by the natural branches of the trees. The frame is painted ceramic in 4 colors: matt white, matt black, matt gold and matt copper. The pendant elements can be installed in 7 different types of canopies (all in white) for single or multiple compositions, which can be either "free" or "modular". The various elements are combined thanks to an accessory (ceramic bar) and glued magnets placed on the same element and on the bar. Two types of "modular" compositions with 6 or 8 lights are recommended in the catalog. They are supplied with a paper template to help the final customer to drill the holes in the ceiling for the off-center positions that will support the various elements.

Other different types of "MODULAR" compositions are possible at the discretion of the customer, but in this case, they will not be provided with the template. The lampholder is E14 and only E14 Led bulbs can be used. For better aesthetic performance (see photos in the catalog), we recommend Philips "**Ledluster**" ON/OFF bulbs or Osram "**Parathom**" dimmable bulbs to dim.
